                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a nucleic acid (I) or its fragment CC encoding caffeoyl-CoA 3-O-methyltransferase (CCOAMT), cinnamyl alcohol CC dehydrogenase (CAD), caffeir acid O-methyltransferase (OMT), connamal acid (I) or its fragment CC cinnamate-4-hydroxylase (C4H), cinnamoyl-CoA reductase (CCR), peroxidase (CER), cellulase (CELL), ferulate-5-hydroxylase (F5H), phenylalanine CC elmamonial lyase (PAL) or 4-coumarate:COA ligase (4CL) from perennial CC ryegrass (Lolium perenne) or fescue species. (I), its nucleotide CC ammonial pase (PAL) or 4-coumarate:COA ligase (4CL) from perennial CC ryegrass (Lolium perenne) or fescue species. (I), its nucleotide CC ammonial pase (PAL) or cellulose degradation in a plant to manipulate cell CC biosynthesis and/or cellulose degradation in a plant to manipulate cell CC walls. (I) or its fragments are useful for isolating cDNAs and genes cenceding homologous proteins from the same or other plant species, as CC hybridisation probes to screen libraries from the desired plant. Short CC segments of (I) or its fragment are useful in amplification protocols CC applify longer nucleic acids or its fragments are useful as molecular CC genes from DNA or RNA. (I) or its fragments are useful as molecular CC genes from DNA or RNA. (I) or its fragments are useful as molecular CC usefuncial stress for quantitative trait loci (QTL) tagging, QTL mapping, CC mechanical stress tolerance, disease resistance, insect pest resistance, CC plant stature, leaf and stem colour. The present sequence represents a CC Lolium perenne (perennial ryegrass) nucleotide sequence from the present CC invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 1295

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
